

The application is a support application of the C-Monitor, it serves to:

- creation, browsing and modification of lists of tasks, which should be launched by the application C-Monitor functional part
- mediation of information about running C-Monitor applications and their tasks
- accessing records, logs and history of C-Monitor activity

More information about individual sections of C-MonitorConsole can be found in the submenu

Scheduling of tasks [1] - procedure how to schedule a periodically launched task <u>Synchronization of task launching</u> [2] - continuity of launching subsequent periodic tasks **States of scheduled tasks** [3] - view of the current state of a scheduled task <u>Watches states and logs</u> [4] - view of the current state of a Watch and log from history of its process

System info [5] - view of processes, which currently load the computer, and other system information

Network info [6] - information about load of nework adapters

Log with information about C-Monitor activity [7] - C-Monitor Current Log Email communication from C-Monitor [8] - information about communication between C-Monitor and CM Server

The application's window is divided to two basic parts - in the left part there's a navigation panel that serves to selection / switching of functional parts, categories that are displayed on the right part. On the following image, you can see the functional part "Scheduler".
