

The most burdening processes of CPU and RAM can be displayed in many places.

View of the most burdening processes of CPU, RAM in the section Online information

In the section *Presentation and Evaluation -> Presentation -> Online information* is displayed the current status and there are given two processes that load CPU and RAM the most among the highlighted lines with CPU and Memory processes, as shown on the next image. Based on this information, you can always tell, which processes are currently the most burdening for the device.

Evaluation and graph of course of the computer's load can be in C-Monitor scheduler also displayed in the section *System Runtime* as shown on the following image. The graph is interactive, which means that if you click anywhere on the graph, you'll see the values of system information that were measured at the time.
